SUMMARY

Third-year Aerospace Engineering student with a strong interest in high-speed aerodynamics, CFD, research, and data-driven engineering problem-solving. Contributed to 10+ multidisciplinary academic team projects, including 2 leadership roles. Seeking internships and research projects to gain more knowledge and experience in these areas.

EDUCATION

Middle East Technical University (NCC) | 2023 - Current (3rd Year)

Aerospace Engineering – Bachelor of Science (BSc)

Current CGPA: 2.72

Current Ranking: 7 / 35 among 3rd-year students

Fethiye Girne American High School | 2019-2023

CGPA: 99.47

SKILLS

CFD: ANSYS Fluent, COMSOL Multiphysics

CAD: AutoCAD, Autodesk Inventor

Programming: Python, C, MATLAB

Microsoft Office: Excel

Soft Skills: Communication, teamwork, adaptability.

HONORS & ACTIVITIES

- Sole recipient among 50 high school students: Honor Student, Certificate of Outstanding Achievement, Certificate of High Success. | 2022

- Outstanding Delegate Award, Model United Nations (MUN) | 2023

- Piano: 8 years of training, with 4+ stage performances

RESEARCH EXPERIENCE & CFD PROJECTS

ANSYS Fluent - Ahmed Body and 3D Wing Aerodynamic Analysis | In Progress

- Working on aerodynamic performance analysis of **Ahmed body** and **3D wing** under supersonic conditions.

ANSYS Fluent - NACA 0012 and NACA 2415 Airfoil Analysis | 2026

- Simulated 2D airfoils across subsonic, transonic, and supersonic regimes. Investigated shock wave behavior, mesh independence, and y+ analysis. Validated lift results with NASA reference data, **achieved error below 5%**.

COMSOL CFD + Experimental Study - NACA 54118 and Non-Rotating 2D Cylinder | 2025

- Contributed to CFD and experimental analysis of a NACA 54118 airfoil and flow around a 2D circular cylinder. Compared numerical and experimental behavior to support model reliability.

PROJECTS

TEKNOFEST - Fighter UAV Competition | **Team Member** | **Passed 1st stage** | 2026 - Present

- Contributing to an autonomous UAV project in a 6-member multidisciplinary team. Responsible for CFD/aerodynamic analysis and YOLO-based vision algorithms for target detection.

Software Projects

- Built '**Quadra Rotate**', a puzzle-based mobile game **published** on Google Play using React, JavaScript, functional components, and hooks.
- Currently developing '**Campus Collab**', a student collaboration platform with a component-based frontend architecture and interactive modules for projects, course tracking, and task management.

VOLUNTEERING EXPERIENCE

European Solidarity Corps (ESC), Spain, La Coruña | Jul 2025 - Sep 2025

- Participated in a 2-month international volunteering project focused on teamwork and cultural heritage.
